1. The disclosure is objected to because of the following informalities:

In the specification, page 1; the status of Co-pending Application(s) is required to be kept current.

Appropriate correction is required.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 & 5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 13 of U.S. Patent No. 6,707,345. Although the conflicting claims are not identical, they are not patentably distinct from each other because the scopes of the inventions are nearly identical. It is noted that:

(1) claim 1 adds the "generating a second oscillatory signal that is **asynchronous** to said first oscillatory signal." The feature is old and well known in the art because two generated signals are usually asynchronous to each other; and

(2) claim 5 adds the "exclusive-OR logic" as claimed in claim 13 of U.S. Patent No. 6,707,345.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

3. Claims 2-4 and 6-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. It is noted that the term "said **second** frequency" (claim 11, line 3-4 from the bottom) should be --said **slow** frequency--.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited references are art of interest.

6. The following is an examiner's statement of reasons for allowance: the recorded references do NOT teach or suggest:

(1) the "frequency variation logic" for "generating a noise signal that directs said second variable frequency oscillator to **vary said second frequency** ..." feature as recited in independent claim 1;

(2) the "frequency variation logic... configured to **1vary said second frequency** ... " feature as recited in independent claim 11; and

(3) the "frequency variation logic ..., and for **varying said frequency ...**" feature as recited in independent claim 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
